excel V+ addresses more than 20 common skin concerns including:

- + Rosacea and age spots
- + Spider and reticular veins
- + Fine lines and wrinkles
- + Acne and acne scars

Q: WHAT IS EXCEL V+?

A: excel V+ is the fast and easy way to treat visible veins, discoloration and wrinkles. It is the most advanced aesthetic laser technology, combining two powerfully precise lasers to target and eliminate unwanted reds, browns, purples and blues on the face and body.

Q: WHAT DOES EXCEL V+ TREAT?

A: excel V+ treats more than twenty unique aesthetic and dermatologic skin concerns. The most common excel V+ treatments include rosacea, facial and leg veins, age/brown spots, and acne scars.

Q: HOW DOES EXCEL V+ WORK?

A: Your treatment provider will select one of excel V+'s two lasers and customize the treatment settings to target the color and depth of your skin concern. Most treatments are finished in just a few minutes, and results are typically seen after a series of 1-3 treatment sessions.

Q: WHAT ARE THE BENEFITS OF EXCEL V+?

A: excel V+ delivers clinically proven results on a wide range of skin concerns. The treatments are comfortable and fast, with most treatments performed in under 10 minutes. Depending on the area(s) and concerns being treated, some procedures may take up to 30 minutes.

Q: HOW MANY TREATMENTS ARE REQUIRED?

A: With excel V+, most skin concerns require only one to two treatment sessions to achieve results. However, the number of treatments will vary based on your condition. Your excel V+ provider will discuss a customized treatment plan during your consultation.

Q: IS THE TREATMENT PAINFUL?

A: excel V+ treatments can feel similar to a quick rubber band snap against skin. Depending on the procedure, a cooled treatment tip will be in contact with the skin to protect and provide additional comfort to the area. A topical anesthetic may be available from your provider to improve your treatment experience.

Q: ARE THERE ANY SIDE EFFECTS? WHAT ABOUT DOWNTIME?

A: Typically, you can wear make-up and return to normal activities immediately. Redness and/or swelling can be expected following treatment. For full face treatments, swelling will peak 24 to 48 hours post treatment and usually resolves within a few days. Your provider may recommend a topical steroid to reduce swelling as needed. Treated brown spots will darken following the treatment and slough off within 3 to 5 days.
